

The Goelst Extension glider

The Goelst extension glider is a unique solution for privacy rails in healthcare, in case the rail needs to be mounted to the ceiling. The extension glider is a rotating glider with S-hook.

Usually, a separation rail is not mounted against the ceiling, but when the rail is mounted against the ceiling, a 'mesh' part is placed in the curtain for the operation of sprinklers and good ventilation.

A good alternative to this solution is the Goelst Extension glider. The rail can be mounted against the ceiling, and the the curtain can be lowered from the rail thanks to the extension glider.

The extension glider can be applied to privacy rails 4100 and 5100.
